

# California Arbovirus Surveillance Bulletin # 17

Week 32 Friday, August 13, 2004

## Weekly Summary

### California Weekly Summary Comments:

#### **Humans:**

This week, California reported sixty-five new humans infected with West Nile virus (WNV).

As of August 12, 2004, a total of 168 WNV infections have been reported from the following counties: San Bernardino (67), Los Angeles (53), Orange (6), Imperial (1), Kern (2), Fresno (2), Tulare (1), and Yolo (1). Eight of the WNV infections were initially detected in asymptomatic individuals through screening done at blood banks - one of the individuals later became symptomatic. Of the 161 WNV cases with symptoms, 75 are classified as West Nile fever, 70 are classified as West Nile neuroinvasive disease, and 16 are of unknown status. The median age for all cases were the data was available equals 50 years (range: 9-91 years). Median age for West Nile fever cases equals 46.5 years (range 9-90 years). Median age for West Nile neuroinvasive disease cases equals 59 years (range: 15-92 years). Sixty-seven percent (108/161) of the cases are male. There have been five fatalities to date in California in Orange (1), San Bernardino (2), and Los Angeles (2) counties.

#### **Equine:**

The California Department of Food & Agriculture confirmed 25 WNV equine cases from Riverside (12), Sacramento (4) Tehama (1), San Bernardino (2), Alpine (1), Butte (1), Fresno (1), Orange (1), San Diego (1), and Ventura (1) counties this past week. This is the first reporting of positive equine cases for Alpine, Butte, Orange, San Diego and Ventura counties. Currently, the YTD stands at 87 positive horses. Forty-eight horses have died or euthanatized from the WNV infection.

#### **Dead Birds:**

The hotline received 5,684 reported dead birds last week (YTD = 50,906). The UC Davis Center for Vectorborne Diseases (CVEC) reported 148 out of 260 dead birds submitted in the past week have tested positive for WNV by RT-PCR: 71 American crows, 24 western scrub jays, 21 yellow-billed magpies, 8 common ravens, 6 Cooper's hawks, 2 American robins, 4 barn owls, 2 Brewer's blackbirds, 3 finches, 2 northern mockingbirds, 2 sparrows, 1 red-shouldered hawk, 1 Rufous-throated hummingbird, and 2 Steller's jays. The American robin, Rufous-throated hummingbird, and Steller's jays were the first of their species tested positive for WNV this year. The YTD stands at 1,249 positive bird carcasses.

The positive birds were collected within 23 counties: Los Angeles (45), Butte (21), Orange (14), Kern (9), Riverside (8), Shasta (8), Glenn (7), Santa Clara (7), Fresno (4), Tehama (4), Sacramento (4), Ventura (3), Alameda (3), San Diego (2), El Dorado (1), Mendocino (1), Humboldt (1), Marin (1), Placer (1), Solano (1), Sonoma (1), Stanislaus (1), and Tulare (1). **These are the first WNV positive dead bird results from the counties of Alameda, El Dorado, Glenn, Humboldt, Marin, Placer, Solano, Sonoma, and Stanislaus.**

A cumulative total of 260 dead birds were tested from 27 of the 28 WNV positive counties. Thus 57.3% (149/260) of the birds tested from these counties were WNV positive. Twelve dead birds from eight other counties in CA tested negative this week.

#### **News Flash:**

CVEC reported Wednesday that 197 of 207 dead birds have tested positive for WNV. The positive birds were collected within the 33 counties of Alameda (1), Butte (48), Calaveras (1), Contra Costa (1), El Dorado (2), Fresno (9), Glenn (5), Kern (3), Lake (1), Lassen (1), Los Angeles (37), Mariposa (1), Mendocino (1), Orange (20), Placer (1), Plumas (1), Riverside (1), Sacramento (16), San Diego (1), San Joaquin (2), San Luis Obispo (1), San Mateo (1), Santa Barbara (1), Shasta (4), Sierra (1), Solano (1), Sonoma (7), Stanislaus (3), Sutter (2), Tehama (18), Tulare (1), Yolo (1), and Yuba (1). **These are the first WNV positive bird results from the counties of Calaveras, Lake, Lassen, Mariposa, Plumas, San Luis Obispo, San Mateo, Sierra, Sutter, Yolo, and Yuba.**

# California Arbovirus Surveillance Bulletin # 17

Week 32 Friday, August 13, 2004

## Mosquito Pools:

CVEC reported 109 WNV positive pools from Los Angeles (43), Orange (30), San Bernardino (26), Kern (4), Shasta (3), Riverside (1), Sacramento (1), and San Luis Obispo (1) counties. Together with the first WNV positive bird, this is also the first positive mosquito activity reported in San Luis Obispo County. Additionally, this is the first detection of viral activity in two new mosquito species other than Culex mosquitoes: *Anopheles hermsi* and *Ochlerotatus squamiger*. To date, the YTD stands at 523 positive pools.

**Correction: For Bulletin # 16, the Greater Los Angeles County VCD requested the correction of *Culex quinquefasciatus* to replace *Cx. erythrothorax* in GRLA pool # 852.**

## Chickens:

Fourteen WNV chicken seroconversions were detected in six flocks from Imperial (1), Los Angeles (1), and San Bernardino (4) counties. Of the 14 seroconversion, five positives came from two new flocks in Imperial (1) and Los Angeles (1) counties. The current YTD total stands at 214 WNV seroconversions.

## Website Information:

For updated information on WNV, please visit the California WNV website, [www.westnile.ca.gov](http://www.westnile.ca.gov); the CDC website, [www.cdc.gov](http://www.cdc.gov), and the USGS website, [www.westnilemaps.usgs.gov](http://www.westnilemaps.usgs.gov). Please go to the Vector website at <http://vector.ucdavis.edu/arbo.html> for flock location and more information on WNV and other vector-borne diseases.

**National Comments:**

As of August 10, 2004, West Nile Virus (WNV) activity has been detected in 41 states, Puerto Rico, and New York City. Maryland and New Hampshire reported their first WNV activity this week. Four-hundred-ninety-five human WNV cases have been reported in 24 states and New York City. The majority of the cases are still being reported from Arizona (274), California (142), and Colorado (44). This week, Kentucky, Louisiana, Minnesota, and Mississippi reported their first human WNV cases of 2004. At this time in 2003, there were 393 human cases from 23 states. Of the 489 WNV cases where data is available, the median age was 51 years (range: 1 month – 99 years) and 58% of the cases were male. Thirty-nine percent of the cases were neuroinvasive. There have been 13 WNV-related fatalities nationwide in 2004.

# **California Arbovirus Surveillance Bulletin # 17**

Week 32      Friday, August 13, 2004

---

## **Dead Birds:**

Dead bird kidney tissues are tested at CVEC using the PCR Taqman assay, subsequent to carcass necropsy at the California Animal Health and Food Safety (CAHFS) Laboratories. Organ pools from PCR positive carcasses are tested using cell culture for virus isolation. The WNV Dead Bird Surveillance Coordinator, Ryan Carney, can be reached directly at (510) 412-6251.

---

## **Sentinel Chickens:**

Dried blood spot specimens from sentinel chickens submitted each week to the DHS Viral and Rickettsial Disease Laboratory (VRDL) are tested for the presence of antibodies to West Nile virus (WNV), western equine encephalomyelitis (WEE), and St. Louis encephalitis (SLE) viruses by EIA and IFA. The VRDL performs additional testing (including Plaque Reduction Neutralization (PRNT) and IgM Capture – Enzyme Linked Immunosorbent Assay (MAC-ELISA)) on specimens from sentinel chickens in which antibodies are detected in new geographic areas. The VRDL also forwards selected serum to the UC Davis Center for Vectorborne Diseases (CVEC) for additional testing for WNV, WEE, and SLE antibodies as needed.

---

## **Mosquito Pools:**

All mosquito pools are screened for WEE, SLE, and WNV viral RNA using a Taqman multiplex RT-PCR. CVEC will cease confirmation testing on PCR-positive pools of *Cx. tarsalis* and *Cx. quinquefasciatus* but will continue to confirm multiplex PCR-positive results for other mosquito species using singleplex RT-PCR. There will be an elimination of *in situ* EI testing of *Ochlerotatus melanimon* pools for CE virus

---

*Prepared by the Vector-Borne Disease Section (Infectious Diseases Branch) and the Viral and Rickettsial Disease Laboratory Branch, Division of Communicable Disease Control, California Department of Health Services, 850 Marina Bay Parkway, Richmond, CA 94804. Questions concerning this bulletin should be addressed to Al Hom by phone (510) 412-6254, FAX (510) 412-6263, or email [ahom@dhs.ca.gov].*
