<p>WEST NILE VIRUS SYMPTOMS Serious Symptoms in a Few People. About one in 150 people infected with WNV will develop severe illness. These severe symptoms can include high fever, headache, neck stiffness, stupor, disorientation, coma, tremors, convulsions, muscle weakness, vision loss, numbness and paralysis. These symptoms may last several weeks, and neurological effects may be permanent. WNV infection can be fatal. Milder Symptoms in Some People. Up to 20 percent of the people who become infected will display symptoms including fever, headache, and body aches, nausea, vomiting, and sometimes swollen lymph glands or skin rash on the chest, stomach and back. Symptoms can last for as little as a few days, though even healthy people have been sick for several weeks. No Symptoms in Most People. Approximately 80 percent of people (about 4 out of 5) who are infected with WNV will not have any symptoms at all.</p>					1	2 Eliminate standing water around your home every week.
3	4 Labor Day	5	6	7	8	9 When you go to outdoor sporting events this fall, wear repellent to keep insects away.
