

California Arbovirus Surveillance Bulletin #27

Week 43 Friday, October 29, 2021

Weekly Update

Humans

West Nile virus

A total of 4 human cases of West Nile virus (WNV) illness were reported this week from 3 counties: Fresno (2), San Francisco (1), and Tulare (1). **This is the first WNV case reported from San Francisco County this year.** In 2021, a total of 92 WNV human cases have been reported from 23 counties. Of the 92 cases, 68 (74%) had neuroinvasive illness and 6 (6.5%) were fatal. The median age of the cases was 60 years, and 57 (62%) were male. Dates of symptom onset ranged from March 31 to October 6. In addition to the 92 cases, 17 asymptomatic WNV infections have been reported from Butte (1), Fresno (3), Kern (2), Kings (2), Los Angeles (3), Madera (1), Merced (1), San Bernardino (1), San Joaquin (1), Stanislaus (1), and Yolo (1) counties. At this time last year, 135 WNV cases had been reported from 21 counties.

St. Louis encephalitis virus

No new cases were reported this week. In 2021, one human case of St. Louis encephalitis virus (SLEV) disease has been reported from Fresno County. At this time last year, two SLEV cases had been reported from two counties.

Dead Birds

One new WNV positive dead bird was reported this week from Contra Costa County. In 2021, 209 WNV positive dead birds have been reported from 19 counties. At this time last year, 333 WNV positive dead birds had been reported from 20 counties.

Mosquito Pools

West Nile virus

One WNV positive mosquito pool was reported this week from Los Angeles County. In 2021, 2,256 WNV positive mosquito pools have been reported from 25 counties. At this time last year, 2,598 WNV positive mosquito pools had been reported from 28 counties.

St. Louis encephalitis virus

No new positives were reported this week. In 2021, 44 SLEV positive mosquito pools have been reported from 8 counties: Fresno (7), Imperial (3), Kings (1), Madera (3), Merced (2), Riverside (22), Stanislaus (2), and Tulare (4). At this time last year, 509 SLEV positive mosquito pools had been reported from 9 counties.

Sentinel Chickens

West Nile virus

No new positives were reported this week. In 2021, 88 WNV positive chickens have been reported from 12 counties. At this time last year, 129 WNV positive chickens had been reported from 15 counties.

St. Louis encephalitis virus

No new positives were reported this week. In 2021, 2 SLEV positive chickens have been reported from Merced County. At this time last year, no SLEV positive chickens had been reported.

California Arbovirus Surveillance Bulletin #27

Week 43 Friday, October 29, 2021

NEW POSITIVES

Dead Birds

County	Agency	City	Zip Code	Species	Date Reported	Virus
Contra Costa	Contra Costa MVCD	Brentwood	94513	California Scrub-Jay	10/6/2021	WNV

Mosquitoes

County	Site Code	Pool #	Species	City	# in Pool	Trap Type	Collected	Virus
Los Angeles	SGVA688	1198	Cx. quinquefasciatus	Alhambra	31	GRVD	10/27/2021	WNV

TEST PROTOCOLS

Humans:

Specimens are tested by local laboratories with an IgM or IgG immunofluorescent assay (IFA) and/or an IgM enzyme immunoassay (EIA). Specimens with inconclusive results are forwarded to the California Department of Public Health Viral and Rickettsial Disease Laboratory (VRDL) for further testing with a plaque reduction neutralization test (PRNT).

Dead Birds

Oral swab samples collected from bird carcasses are tested at the UC Davis Arbovirus Research and Training laboratory (DART) or at a local agency for West Nile virus by RT-qPCR.

Sentinel Chickens:

Dried blood spot samples from sentinel chickens are tested at the California Department of Public Health Vector-Borne Disease Laboratory for IgG antibodies to West Nile, St. Louis encephalitis, and western equine encephalomyelitis viruses by an EIA. Positive samples are confirmed by IFA, western-blot, or PRNT.

Mosquito Pools:

Mosquito pools are tested at DART or at a local agency for West Nile, western equine encephalomyelitis, and St. Louis encephalitis viral RNA using a multiplex RT-qPCR. Invasive *Aedes* mosquitoes (*Ae. aegypti* and *Ae. albopictus*) are also tested at DART for chikungunya, dengue, and Zika viral RNA by a separate RT-qPCR.
